

NutriDapt™

ADAPTIVE LIQUID NUTRITION

LIQUID NUTRITION REIMAGINED

For Critically Ill or Injured Dogs & Cats

NutriDapt

- ✓ Significant time savings
- ✓ Easily customized nutrition
- ✓ Multiple diagnoses ► One system

NutriDapt is a first-of-its-kind liquid nutrition system for critically ill or injured dogs and cats. The system's proprietary software quickly calculates optimal energy, protein and fat requirements for each patient and provides easy, customized meal preparation instructions.

How it Works

Enter patient information in the NutriDapt software including diagnosis, weight and number of feeding days. In just moments, receive an automated, custom feeding plan completely tailored to each patient's unique liquid feeding needs.

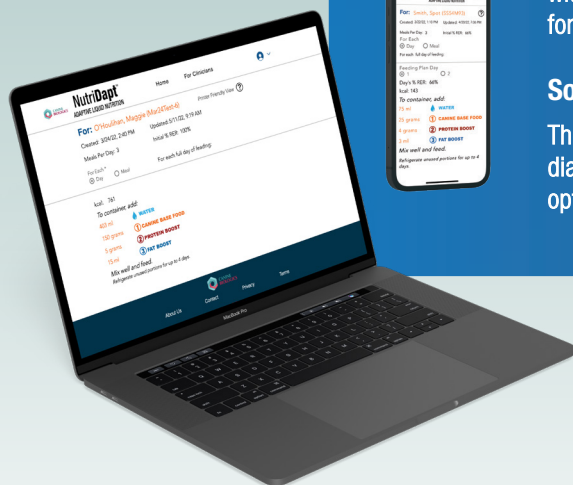

A Simple Solution for Complex Feeding Requirements

Problem:

Spot, a 12-year-old, mixed-breed dog with Cushings Disease, has been anorexic for two days.

Solution:

The NutriDapt software evaluates several diagnostic parameters to determine the optimal blend of nutrition components.

The Future of Liquid Feeding Has Arrived

When patients are critically ill or injured, they need a diet with the right levels of premium nutrients. Only NutriDapt is designed for high-quality, precise, individualized feeding.

The NutriDapt Adaptive Liquid Nutrition System lets veterinarians fine-tune their patients' diets for protein, fat and calories during those crucial days of enteral feeding.

Critical Care Nutrition Tailored for Each Patient

Clinicians enter patient information including diagnosis, weight and number of feeding days into the NutriDapt web-based planning app. Accessed from a desktop or smart phone—no downloads or updates required—the app delivers a patient-specific, customized feeding plan in just seconds.

Next, measure and combine the NutriDapt ingredients starting with our low-phosphorous, low-fat, low-protein Base Diet. Specified amounts of Protein Boost and Fat Boost are then measured and added to produce a high-energy, low-volume meal to minimize patient discomfort and reduce the time required for feeding.

THE NUTRIDAPT ADVANTAGE

Busy practices can save valuable time and improve vulnerable patient outcomes with this breakthrough enteral nutrition system for dogs and cats.

- 1** Create customized, highly accurate feeding plans quickly and easily with NutriDapt's software assistance.
- 2** Use one nutrition system with a wide variety of canine and feline conditions.
- 3** Increase patient comfort with a smaller volume of liquid while delivering a high-energy formula.
- 4** Formulated by a board-certified Professor of Clinical Veterinary Nutrition.
