

# No More Nutrition Math!

**NutriDapt™**  
ADAPTIVE LIQUID NUTRITION

## The Future of Enteral Feeding Has Arrived

Learn More

New customers must contact Canine Biologics for a clinic ID to use the NutriDapt software.

Canine Biologics has taken the nutrition math out of liquid feeding. The software-guided NutriDapt system customizes the energy, protein and fat for each patient. With NutriDapt, clinicians can provide:

- ✓ Substantially more energy-dense nutrition with less liquid (1.5 to 2.4 kcal/ml)
- ✓ Optimized meals for 30 conditions for dogs and cats
- ✓ Nutrition for all canines and felines with one product
- ✓ Customized energy, protein and fat
- ✓ Patient-specific nutrition

DVMs using NutriDapt say it saves 30–60 minutes per patient when liquid feeding! The software formulates patient-specific recipes in seconds. Then just mix to create customized meals. No other liquid diet can offer tailored nutrition based on each patient's diagnosis, GI symptoms and other clinical factors.

*"We see a high volume of patients and our staff is saving a significant amount of time and money with NutriDapt. We definitely recommend it to other clinics."*

**Kerri Nelson, DVM & Medical Director**  
Veterinary Emergency Group, Denver

**Customized:** Meal plans with the correct amount of energy, protein and fat for each patient

**Precise:** Software calculates nutrition plans for 30+ conditions for dogs and cats

**Trusted:** Meal plan recipes formulated by a board-certified DVM nutritionist specializing in critical care diets

**Fast:** Patient-specific meals calculated and ready to feed in **less than 5 minutes!**

ADAPTIVE LIQUID NUTRITION

## Getting Started with NutriDapt

Every clinic begins their NutriDapt journey with one or more Starter Kits. Each Starter Kit contains:

**Base Diet** – 5, one-pound pouches  
**Protein Boost** – 2, half-pound pouches  
**Feline Protein Boost+** – 2, 4.7-ounce pouches  
**Fat Boost** – 2, eight-ounce bottles  
**Digital gram scale**  
**Two mixing bottles**

Each clinic also receives a **one-year, renewable license to use the NutriDapt software**. The license is per clinic, regardless of the number of users, and is included in the Starter Kit cost with larger clinics paying a larger initial license fee. After the first year, the software license renewal fee is \$239 per clinic. Please use the guidelines below to plan your first order.

<i><b>Patients Liquid Fed/Month</b></i>		<i><b>Ordering Recommendation</b></i>
1–4 patients per month	=	1 Starter Kit
5–10 patients per month	=	2 Starter Kits
11+ patients per month	=	3 Starter Kits

## Key Benefits

- NutriDapt software formulates and calculates patient-specific meal plans in less than a minute.
- Meals contain the precise amount of energy, protein and fat for each patient based on their condition.
- Meal plans are created by following recipes to mix the NutriDapt ingredients with water in a shaker bottle.

## NutriDapt Fast Facts

**Shelf Life** - Unopened NutriDapt products have a 24-month shelf life from manufacture date. After opening, the Base Diet needs to be refrigerated and used within 30 days. Protein Boost, Feline Protein Boost+ and Fat Boost, once opened, are best stored at room temperature and should be used within 90 days.

**Long-Term Feeding** - NutriDapt may be continuously fed for:

- Adult dogs and cats up to 30 days
- Kittens up to 14 days
- Puppies up to 7 days

Beyond these times, additional calcium and phosphorus are needed. A supplement for long-term feeding is planned for the 1–2% of patients requiring liquid diets for chronic conditions. At this time, patients may rotate between NutriDapt and a complete and balanced diet for long-term feeding.

*As Starter Kit meal plan ingredients are used, individual products can be ordered separately in small or large quantities.*

## How Long Will the Starter Kit(s) Last?

When your initial order matches the number of animals you liquid feed in a month, the Starter Kit ingredients should last approximately six weeks, depending on the size of animals being fed. Some clinics find their initial order lasts longer than six weeks while on rare occasions a clinic will need to purchase some additional product before the six weeks is up if feeding large dogs.

- NutriDapt offers higher energy density (1.5 to 2.4 kcals/ml) which means less volume for greater patient comfort.
- Low-glycemic formula does not induce diarrhea.
- Software does all the nutrition math and takes the guesswork and errors out of determining patient nutrition.
- NutriDapt costs much less than the most popular liquid diet.
- 3-French and larger feeding tubes are compatible.

**Formulation** - NutriDapt meal plan recipes were formulated by a board-certified professor of veterinary clinical nutrition specializing in critical care diets.

**Multiple Conditions** - DVMs can override the recommended RER percentage and levels of protein and fat in patient meal plans to address secondary conditions. For example, a trauma patient's moderate fat recipe can be changed to low fat if the patient has a history of pancreatitis or a concurrent condition requiring a specific nutritional profile.

**Palatability** - NutriDapt liquid meals are extremely palatable and ideal for tube, syringe and bowl feeding.

**Offline Guide** - Canine Biologics provides an Offline Guide to ensure users can formulate meal plans should access to the cloud-based software be interrupted.
